1 Basis of presentation and International Financial Reporting Standards ("IFRS")

iCo Therapeutics Inc. ("iCo" or the "Company") is a development stage pharmaceutical company focused on the reprofiling and repositioning of drugs and drug candidates with a previous clinical history for new disease indications. iCo's current business strategy is to acquire the rights to drugs and drug candidates from third parties and run human clinical trial programs for new disease indications, with an emphasis on ophthalmology. The Company currently has three compounds under development. The first, iCo-007, is an anti-sense molecule that the Company believes reduces levels of a key protein associated with diabetic retinopathy. The Company completed a Phase I, open label, dose-escalating clinical trial at four trial sites in the United States using a single injection of iCo-007 in patients with diffuse diabetic macular edema. The trial met its primary end point, and the Company is currently planning a Phase II clinical trial. iCo-008 is a monoclonal antibody that the Company plans to take into clinical trials for age related macular degeneration. On December 8, 2010, the Company also signed an option to license the systemic applications of iCo-008 to Immune Pharmaceuticals Corp. ("Immune"). See subsequent event note. iCo-009 is an experimental oral formulation of Amphotericin B that is at a pre-clinical stage.

The Company is considered to be in the development stage as most of its efforts have been devoted to research and development, raising capital, recruitment of personnel and long-term planning. The Company is publicly traded on the TSX Venture Exchange under the symbol "ICO."

These interim financial statements have been prepared in accordance with IFRS applicable to the preparation of the interim financial statements, including IAS 34 "Interim Financial Reporting" and IFRS 1, "First Time Adoption of International Financial Reporting Standards". The interim financial statements do not include all of the information required for full annual financial statements. The interim financial statements have not been reviewed or audited b the Company's auditors.

The policies applied in these interim financial statements are based on IFRS issues and outstanding as of June 29, 2011, the date the Board of Directors approved the statements. Any subsequent changes to IFRS that are given effect in the Company's annual financial statements for the year ending December 31, 2011 could result in restatement of these interim financial statements including the transition adjustment recognized on change over to IFRS. The interim financial statements should be read in conjunction with the Company's Canadian GAAP annual financial statements for the year ended December 31, 2010.

Going concern

These financial statements have been prepared using IFRS, which contemplates the realization of assets and settlement of liabilities in the normal course of business as they come due. The recoverability of the Company's intangible and other long-term assets and its ability to continue as a going concern are dependent upon its ability to fund its research and development programs, manage its foreign currency exposures, defend its patent rights and generate positive cash flows from operations.

For the quarter end March 31, 2011, the Company reported a loss of $488,934 and an accumulated deficit of $16,956,567 at that date. The Company obtained an equity line facility whereby iCo may access, subject to certain conditions, up to $10 million of capital over a three-year period. However, as the Company does not have the prospect of achieving revenues in the near future, the Company will require additional funding to maintain its research and development projects and for general operations. As at March 31, 2011, the

Company had cash and short-term investments on hand of $1,678,880 and working capital of $1,369,983. These circumstances lend significant doubt as to the ability of the Company to meet its obligations as they come due and, accordingly, the appropriateness of the use of accounting principles applicable to a going concern.

Consequently, management is pursuing various financing alternative to fund the Company's operations so it can continue as a going concern. Management plans to secure the necessary financing through the issue of new equity and/or the entering into of strategic partnership arrangements. Nevertheless, there is no assurance that these initiatives will be successful.

These financial statements do not reflect the adjustments to the carrying values of assets and liabilities and the reported expenses and balance sheet classifications that would be necessary if the Company were unable to realize its assets and settle its liabilities as a going concern in the normal course of operations. Such adjustments could be material.

2 Significant accounting policies:

Basis of presentation

The interim financial statements have been prepared on a historical cost basis and are presented in Canadian dollars which is the Company's functional currency.

Use of estimates and significant judgments

The preparation of financial statements in accordance with IFRS requires the Company's management to make estimates and assumptions that affect the amounts reported in these financial statements and notes thereto. The Company regularly reviews its estimates; however, actual amounts could differ from the estimates used and, accordingly, materially affect the results of operations. Significant areas requiring management to make estimates include the useful lives of non-current assets, revenue recognition, share based compensation, intangibles and impairment of intangibles. Further details of the nature of these assumptions and conditions may be found in the relevant notes to the financial statements. Key sources of estimation uncertainty that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year include: revenue recognition, share based compensation, and the impairment of intangible assets.

Cash and cash equivalents

Cash and cash equivalents consist of cash on deposit and highly liquid short-term interest-bearing securities with maturities at the date of purchase of three months or less. Cash and cash equivalents are held at recognized Canadian financial institutions. Interest earned is recognized in the statements of operations.

Foreign currency translation

Monetary assets and liabilities denominated in currencies other than the Canadian dollar are translated at the rate of exchange in effect at the end of the period. Revenue and expense items are translated at the rate of

exchange in effect on the dates they occur. Exchange gains or losses are recognized immediately in the consolidated statements of operations.

Future income taxes

The Company follows the liability method of accounting for income taxes. Under this method, current income taxes are recognized for the estimated income taxes payable for the current period. Future income tax assets and liabilities are recognized in the current period for temporary differences between the tax and accounting basis of assets and liabilities as well as for the benefit of losses available to be carried forward to future years for tax purposes. Future income tax assets and liabilities are measured using substantively enacted tax rates and laws expected to apply in the years in which those temporary differences are expected to be recovered or settled. The effect of a change in tax rates on future income tax assets and liabilities is recognized in operations in the period that includes the substantive enactment.

Revenue recognition

The Company revenue comprises of initial fees and milestone payments derived from collaborative and other licensing arrangements. Licensing fees are recognized as revenue when persuasive evidence of an arrangement exists, the contracted fee is fixed or determinable, the intellectual property is delivered to the customer, collection is reasonably assured, and the Company has substantially completed its performance obligations.

Financial instruments

Financial instruments are classified into one of five categories: financial assets measured at fair value through profit or loss, held-to-maturity investments, loans and receivables, available-for-sale assets, financial liabilities at fair value through profit and loss, and other financial liabilities.

For each financial instrument, subsequent measurement and accounting for changes in fair value are dependent on the initial classification.

Financial assets measured at fair value through profit or loss are measured at fair value with changes in fair value recognized in net income.

Available-for-sale assets financial instruments are measured at fair value with changes in fair value recorded in other comprehensive income until the investment is derecognized or impaired at which time the amounts would be recorded in net income.

Other financial liability, subsequent adjustments to expected cash flows are recorded if and when they occur through adjustments to the related expense.

The Company's accounts receivable are classified as loans and receivables, which are measured at amortized costs. Accounts payable, accrued liabilities and the financial liabilities are classified as other financial liabilities are measured at amortized costs.

Property and equipment

Property and equipment are stated at costs less accumulated amortization and any accumulated impairment losses. Cost includes expenditures that are directly attributable to the acquisition of the asset. Subsequent costs are included in the assets carrying amount and recognized as a separate asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the Company and the cost can be measured reliably. The carrying amount of a replaced asset is derecognized when replaced. Depreciation methods, useful lives and residual values are reviewed at each annual reporting date and adjusted if appropriate. Amortization is recorded on a straight-line basis over the estimated lives of the property and equipment as follows:

Computer hardware	3 years
Computer software	2 years
Office equipment	5 years

Gains and losses on disposals are determined by comparing the proceeds with the carrying amount and are recognised within 'Other (losses)/gains – net' in the income statement.

Intangible assets

Intangible assets include patent rights and technology rights which have been acquired from third parties. Intangible assets are carried at cost less accumulated amortization. The Company evaluates the useful economic life of the specific intangible asset and amortizes the asset accordingly. The intangible assets are amortized on a straight-line basis over the range of 9 and 11 years.

Impairment of non-financial assets

The Company periodically reviews the useful lives and the carrying value of its long-lived assets. Long-lived assets are reviewed for impairment upon the occurrence of events or changes in circumstances indicating that the carrying value of the asset may not be recoverable. For the purpose of measuring recoverable amounts, assets are grouped at the lowest levels for which there are separately identifiable cash flows (cash-generating units or "CGU"). The recoverable amount is the higher of an asset's fair value less costs to sell and value in the use (being the present value of the expected future flow of the relevant asset or CGU). And impairment loss is recognized for the amount by which the asset's carry amount exceeds its recoverable amount.

Provisions

Provisions for research and development and general operations are recognised when: the group has a present legal or constructive obligation as a result of past events; it is probable that an outflow of resources will be required to settle the obligation; and the amount has been reliably estimated.

Where there are a number of similar obligations, the likelihood that an outflow will be required in settlement is determined by considering the class of obligations as a whole. A provision is recognised even if the likelihood of an outflow with respect to any one item included in the same class of obligations may be small.

Share-based compensation

The Company grants share-based options to directors, officers, employees and consultants pursuant to a stock-based compensation plan described in note 9. Compensation expense is recorded for share-based options issued to employees and non-employees using the fair value method with a corresponding increase in contributed surplus. Any consideration received on exercise of stock options or the purchase of stock, plus the fair value of options or stock, is credited to capital stock.

Under the fair value method, stock-based options are measured at the fair value of the equity instrument issued.

Research and development

Research expenditures are expensed in the period incurred. Product development expenditures are expensed as incurred unless the product candidate meets criteria for deferral and amortization. No product development expenditures have been deferred to date

Loss per share

Basic and diluted loss per share is calculated using the weighted average number of common shares outstanding. The outstanding warrants and options have been excluded from the calculations of diluted loss per share because their inclusion would be anti-dilutive.

3 Transition to IFRS

In preparing these interim financial statements in accordance with IFRS 1, no reconciliation differences were identified. As a result, equity reported in accordance with Canadian GAAP is the same as IFRS on at January 1, 2010, December 31, 2010 and March 31, 2010. Similarly total comprehensive loss reported under Canadian GAAP is the same as IFRS for the year ended December 31, 2010 and the three months ended March 31, 3010.

In preparing these interim financial statements in accordance with IFRS 1, the Company has applied the mandatory exceptions and selected some of the optional exemptions from full retrospective application of IFRS. Below describes select IFRS 1 applicable exemptions applied by the Company in the conversion from Canadian GAAP to IFRS.

IFRS 1 Exemptions Selected:

Share-based payments – IFRS 1 encourages application of IFRS 2, Share-based Payments, to equity instruments granted on or before November 7, 2002, but permits the application only to equity instruments granted after November 7, 2002 that had not vested by the Transition Date. The Company elected to apply IFRS 2 to equity instruments granted after November 7, 2002 that had not vested by the Transition Date

Accounting standards issued and not yet applied

Financial instruments

In November 2009, the IASB issued IFRS 9 – Financial Instruments as the first step in its project to replace IAS 39 – Financial Instruments: Recognition and Measurement with a new standard for the financial reporting of financial instruments that is principles-based and less complex than IAS 39. IFRS 9 addressed the classification and measurement of financial assets and financial liabilities and is effective for annual periods beginning on or after January 1, 2013, with earlier adoption permitted. The Company is currently evaluating the impact the final standard is expected to have on its financial statements.

Fair value measurement
On May 12, 2011 the IASB issued IFRS 13 – Fair Value Measurement. This standard defines fair value and sets out in a single IFRS a framework for measuring fair value. The standard applies when another IFRS requires or permits fair value measurements or disclosures about fair value measurements. The standard has an effective date of January 1, 2013. The Company is currently evaluating the impact that the standard is expected to have on its financial statements.

4 Financial risk management

The Company is exposed to certain financial risks, including credit risk, liquidly risk and market risk.

a) Credit risk

Credit risk is the risk of an unexpected loss if a customer or counter party to a financial instrument fails to meet its contractual obligations and arises principally from the company's cash and cash equivalents and other receivables. The Company invests its excess cash in short term money market instruments such as Guaranteed Investment Certificates. The Company has established guidelines relative to diversification, credit ratings and maturities that maintain safety and liquidity. These guidelines are periodically reviewed by the Company's audit committee and modified to reflect changes in market conditions.

b) Liquidity risk

Liquidity risk is the risk that the Company will encounter difficulty in raising funds to meet cash flow requirements associated with financial instruments. The recent problems in the global credit markets have resulted in a drastic reduction in the ability of the companies to raise capital through the public markets. The Company continues to manage its liquidity risk by being fairly consistent with outflows experienced for the year ended December 31, 2010.

c) Market risk

Market risk is the risk that changes in market prices, such as foreign exchange rates, interest rates and equity prices will affect the Company's income or valuation of its financial instruments.

The company is exposed to financial risk related to fluctuation of foreign exchange rates. Foreign currency risk is limited to the portion of the Company's business transactions denominated in currencies other than the Canadian dollar, primarily expenses for research and development incurred in US dollars ("USD"). The Company believes that the results of operations, financial position and cash flows would be affected by a sudden change in foreign exchange rates, but would not impair or enhance its ability to

pay its USD. The Company manages foreign exchange risk by maintaining USD cash on hand to fund its short term USD expenditures. As at March 31, 2011 USD denominated cash totalled USD $82,242. The only accounts payable and accrued liabilities exposure is in USD and that total is $131,780.

The company is subject to interest rate risk on its cash and cash equivalents and believes that the results of operations, financial position and cash flows would not be significantly affected by a sudden change in market interest rates relative to the investment interest rates due to the short term nature of the investments. As at March 31, 2011, cash and cash equivalents held in Canadian dollar savings accounts or short term investments is $1,678,880. The interest rates range from 0.05% to 1.0%.

14 Commitments and contingencies

a) Lease commitments

The operating lease agreement for office space (expiring May 31, 2012) has the following future minimum annual lease payments:

	$
2011	15,946
2012	12,075

Rent expense for the three months ended March 31, 2011 amounted to $12,509 (2010 - $12,179).

b) Contractual commitments

The Company may be required to make milestone, royalty, and other research and development funding payments under research and development collaboration and other agreements with third parties. These payments are contingent upon the achievement of specific development, regulatory and/or commercial milestones. The Company has not accrued for these payments as of March 31, 2011 due to the uncertainty over whether these milestones will be achieved. The Company's significant contingent milestone, royalty and other research and development commitments are as follows:

ISIS

In connection with the licensing agreement between ISIS and the Company, the Company may be required to make additional contingent payments of up to US$22 million upon the achievement of certain development and commercialization milestones of iCo-007 in its first ocular indication. In addition, the Company may be required to pay royalties on future revenues. The Company may also be required to make additional contingent payments upon the achievement of certain development and commercialization milestones of iCo-007 in other ocular and non-ocular disease indications.

MedImmune

In connection with the licensing agreement between MedImmune and the Company, the Company was required to make upfront payments totalling US$400,000, of which the last payment was made in December 2007. The Company may be required to make additional contingent payments of up to US$7 million upon the achievement of certain development and commercialization milestones. In addition, the Company may be required to pay royalties on future revenues. The Company may also be required to make additional contingent payments upon the achievement of certain development and commercialization milestones for products developed outside the ocular field**.**

UBC

On May 6, 2008, the Company signed an agreement with UBC for the exclusive worldwide licence to iCo-009 (the "UBC Licence"). In consideration for the UBC Licence, the Company paid UBC an initial licence fee of $20,000 and is required to pay annual fees to UBC for maintaining the licence until such time as a New Drug Application ("NDA") for iCo-009 is approved. The Company is required to make additional contingent payments of up to $1,900,000 in aggregate upon the achievement of certain development and commercialization milestones and is also required to pay royalties on future revenues. The UBC Licence additionally obligated the Company to contribute research funding (which may be in the form of direct payments from the Company or indirect payments, such as securing research grants) to UBC for the iCo-009 program.

15 Financial instruments

Financial instrument disclosures, establish a fair value hierarchy that requires the Company to maximize the use of observable inputs and minimize the use of unobservable inputs when measuring fair value. The Company primarily applies the market approach for recurring fair value measurements. The section describes three input levels that may be used to measure fair value:

Level 1 - unadjusted quoted prices in active markets for identical assets or liabilities. An active market for the asset or liability is a market in which transactions for the asset or liability occur with sufficient frequency and volume to provide information on an ongoing basis.

Level 2 - quoted prices for similar assets or liabilities; quoted prices in markets that are not active; or other inputs that are observable or can be corroborated by observable market data for substantially the full term of the assets or liabilities.

Level 3 - unobservable inputs that are supported by little or no market activity and that are significant to the fair value of the assets or liabilities.

Financial instruments whose carrying value approximates fair value

Cash and cash equivalents, short-term investments, and accounts payable and accrued liabilities are financial instruments whose fair value approximates their carrying value due to their short-term maturity. The input level used by the Company to measure fair value of its cash and cash equivalents and short-term investments is a Level 2 input as they are valued using observable market data.

16 Subsequent events

On April 14, 2011, the Company announced that it had entered into an equity line facility (“ELF”) with Dutchess Opportunity Cayman Fund Limited (“Dutchess”). Under the terms of the agreement, Dutchess has committed to provide up to $10 million of equity capital over a three-year period. iCo may choose to draw on the ELF at iCo’s sole discretion in amounts of $250,000 or 200% of the daily average volume of the Company’s common shares (as traded on the Toronto Stock Venture Exchange) multiplied by the average of the three daily closing prices immediately prior to the draw down date. Any newly issued common shares are subject to a minimum price set by iCo. iCo can terminate the ELF at any time. In connection with the ELF, iCo must file and clear a short-form shelf prospectus with the applicable securities authorities in Canada. The ELF, which will be publicly filed, is subject at this time to certain conditions, including the filing of a shelf prospectus, and customary regulatory approvals.

On June 24, 2011, the Company announced a license deal with Immune Pharmaceuticals. Under the licensing deal, total upfront consideration consists of US$500,000 (of which US$300,00 had been previously received pursuant to option and option extensions fees), 600,000 Immune ordinary shares and 200,000 Immune warrants equating to 6.14% ownership stake in Immune (on a fully diluted basis) with preferential share features. In addition to this there will be future considerations of $32 million US in milestone plus

royalties and license for systemic uses (iCo retains exclusive rights to all ocular applications). Immune expects to initiate new GMP manufacturing with a leading biologics manufacturer and plan for a phase II clinical trials in inflammatory Bowel Disease.
