Independent Auditor's Report

To the Shareholders of
iCo Therapeutics Inc.

We have audited the accompanying financial statements of iCo Therapeutics Inc., which comprise the balance sheets as at December 31, 2015 and December 31, 2014 and the statements of loss and comprehensive loss, changes in shareholders' equity and cash flows for the years then ended, and the related notes, which comprise a summary of significant accounting policies and other explanatory information.

Management's responsibility for the financial statements

Management is responsible for the preparation and fair presentation of these financial statements in accordance with International Financial Reporting Standards as issued by the International Accounting Standards Board, and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's responsibility

Our responsibility is to express an opinion on these financial statements based on our audits. We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained in our audits is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the financial statements present fairly, in all material respects, the financial position of iCo Therapeutics Inc. as at December 31, 2015 and December 31, 2014 and its financial performance and its cash flows for the years then ended in accordance with International Financial Reporting Standards.

(in Canadian dollars)

1 Nature of operations

iCo Therapeutics Inc. (“iCo” or the “Company”) is a Canadian biotechnology company principally focused on the identification, development and commercialization of drug candidates with a clinical history and re-doses, reformulates and develops these drug candidates to treat sight and life-threatening diseases. The Company currently has in-licensed three assets: iCo-007; iCo-008 and the Oral AmpB Delivery System.

iCo-007 is an antisense compound in-licensed from Ionis Pharmaceuticals, Inc. (formerly Isis Pharmaceuticals Inc.). In August 2011, the Company initiated a US physician sponsored Phase 2 clinical trial involving iCo-007, (‘iDEAL Study’), evaluating iCo-007 in diabetic macular edema (“DME”). On June 9, 2014, the Company announced top-line results related to the eight month visual acuity (“VA”) primary endpoint for subjects enrolled in the iDEAL Study. The Company determined that the Phase 2 iCo-007 DME data presented at that time, along with additional internal analysis, to date had not demonstrated any subgroup response rates that warranted further financial investment by iCo particularly in the DME program at this time. The Company continues to investigate other potential use indications for its licensed technology which targets the C-Raf kinase pathway. Uses of these indications may include certain oncology applications as a number of approved drugs currently target Raf kinase isoforms.

iCo-008 is a monoclonal antibody that the Company plans to take into clinical trials for vernal keratoconjunctivitis (“VKC”) and possibly age related macular degeneration. On December 8, 2010, the Company also signed an option to license the systemic applications of iCo-008 to IMMUNE Pharmaceuticals Corp. (“IMMUNE”). The option to convert to a full licence was exercised by IMMUNE on June 24, 2011. On February 21, 2013, IMMUNE announced it was initiating a Phase II clinical trial with iCo-008 (“Bertilimumab”) in patients with ulcerative colitis. The Phase II program was further expanded to examine Bertilimumab for the treatment of bullous pemphigoid, a rare auto-immune condition that affects the skin and causes the formation of blisters.

The Oral AmpB Delivery System is an experimental oral formulation of Amphotericin B that is at a pre-clinical stage.

The Company is considered to be in the development stage as most of its efforts have been devoted to research and development, raising capital, recruiting personnel and long-term planning. The Company is publicly traded on the TSX Venture Exchange under the symbol “ICO” and the OTCQX under the symbol “ICOTF”. The Company is incorporated and domiciled in British Columbia, Canada. The address of its head office is Suite 760, 777 Hornby Street, Vancouver, British Columbia, V6Z 1S4.

On January 18, 2016, the Company announced that in an effort to preserve its asset base and maximize shareholder value, the Company is undertaking a strategic re-organization (note 18).

(in Canadian dollars)

2 Significant accounting policies

Basis of presentation and statement of compliance

The financial statements of iCo have been prepared in accordance with International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board ("IASB") and the IFRS Interpretations Committee (IFRIC) interpretations applicable to companies reporting under IFRS.

The financial statements have been prepared on a historical cost basis except for the other investments which are recorded at fair value. The financial statements are presented in Canadian dollars which is the Company's functional currency.

These financial statements were approved by the Board of Directors for issue on April 14, 2016.

Critical accounting estimates and judgments

Estimates and judgments are continually evaluated and are based on historical experience and other factors, including expectations of future events that are believed to be reasonable under the circumstances.

Critical accounting estimates and assumptions

The preparation of financial statements in accordance with IFRS requires the Company's management to make estimates and assumptions that affect the amounts reported in these financial statements and notes. The Company regularly reviews its estimates; however, actual amounts could differ from the estimates used and, accordingly, materially affect the results of operations.

Critical judgments in applying accounting policies

Areas requiring management to make significant judgments include the impairment of intangible assets. The Company assesses at least every reporting period whether there are indicators of impairment in accordance with the accounting policy stated in the note referenced in these financial statements. Based on the status of the trials, management identified indicators and wrote off the remaining balance of iCo-007 in 2014. Refer to note 7 for details regarding the writeoff. No additional impairment indicators were identified in 2015.

Cash and cash equivalents

Cash and cash equivalents consist of cash on deposit and highly liquid short-term interest bearing securities with maturities at the date of purchase of three months or less. Cash and cash equivalents are held at recognized Canadian financial institutions. Interest earned is recognized in the statements of loss.

Short-term investments

Short-term investments are liquid deposits with maturity dates between three and six months.

(in Canadian dollars)

Foreign currency translation

The financial statements are presented in Canadian dollars, the Company's functional currency.

Foreign currency transactions are translated into Canadian dollars using the exchange rates at the date of the transactions or valuation where items are re-measured. Foreign exchange gains or losses resulting from the settlement of transactions and from the translation at year-end rates of monetary assets and liabilities denominated in foreign currencies are recognized in the statements of loss.

Current and deferred income taxes

The Company follows the liability method of accounting for income taxes. Under this method, current income taxes are recognized for the estimated income taxes payable for the current period. Deferred income tax assets and liabilities are recognized in the current period for temporary differences between the tax and accounting basis of assets and liabilities as well as for the benefit of losses available to be carried forward to future years for tax purposes. Deferred income tax assets and liabilities are measured using substantively enacted tax rates and laws expected to apply in the years in which those temporary differences are expected to be recovered or settled. The effect of a change in tax rates on deferred income tax assets and liabilities is recognized in operations in the period that includes the substantive enactment.

Financial instruments

Financial instruments are classified into the following categories: available-for-sale investments, loans and receivables, financial liabilities at amortized cost and financial assets at fair value through profit or loss ("FVTPL"). Management determines the classification of its financial assets at initial recognition.

At initial recognition, the Company classifies its financial instruments in the following categories:

a) Available-for-sale investments: Available-for-sale investments are non-derivatives that are either designated in this category or not classified in any of the other categories. The Company's available-for-sale assets comprise investments in equity securities. These are classified as "other investments" within current assets.

   Available-for-sale investments are recognized initially at fair value plus transaction costs and are subsequently carried at fair value. Gains or losses arising from re-measurement are recognized in other comprehensive income except for exchange gains and losses on the translation of debt securities, which are recognized in the statements of loss. When an available-for-sale investment is sold or impaired, the accumulated gains or losses are moved from accumulated other comprehensive income to the statements of loss and are included in other gains and losses (net). Available-for-sale investments are classified as non-current, unless an investment matures within 12 months, or management expects to dispose of it within 12 months.

(in Canadian dollars)

b) Loans and receivables: Loans and receivables are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market. The Company's loans and receivables comprise of cash and cash equivalents, short-term investments and other receivables, and are included in current assets due to their short-term nature. Loans and receivables are initially recognized at the amount expected to be received, less, when material, a discount to reduce the loans and receivables to fair value. Subsequently, loans and receivables are measured at amortized cost using the effective interest method less a provision for impairment.

c) Financial liabilities at amortized cost: Financial liabilities at amortized cost comprise accounts payable, which are initially recognized at the amount required to be paid, less, when material, a discount to reduce the payables to fair value. Subsequently, accounts payable are measured at amortized cost using the effective interest method.

d) Financial assets at FVTPL: Financial assets at FVTPL are financial assets held for trading. A financial asset is classified in this category if acquired principally for the purpose of selling in the short term. Derivatives are also categorized as held for trading unless they are designated as hedges. Assets in this category are classified as current if expected to be settled within 12 months; otherwise, they are classified as non-current. The Company's non-current portion of other investments ("IMMUNE Warrants") are classified as FVTPL and re-measured each reporting period with the fair value gains and losses recorded in the statements of loss.

Impairment of financial assets

At each reporting date, the Company assesses whether there is objective evidence that a financial asset (other than a financial asset classified as FVTPL) is impaired.

For equity securities, a significant or prolonged decline in the fair value of the security below its cost is also evidence that the assets are impaired.

If such evidence exists, the Company recognizes an impairment loss, as follows:

a) Financial assets carried at amortized cost: The impairment loss is the difference between the amortized cost of the loan or receivable and the present value of the estimated future cash flows, discounted using the instrument's original effective interest rate. The carrying amount of the asset is reduced by this amount either directly or indirectly through the use of an allowance account.

b) Available-for-sale financial assets: The impairment loss is the difference between the original cost of the asset and its fair value at the measurement date, less any impairment losses previously recognized in the statements of loss. This amount represents the loss in accumulated other comprehensive income that is reclassified to net loss.

Impairment losses on financial assets carried at amortized cost are reversed in subsequent periods if the amount of the loss decreases and the decrease can be related objectively to an event occurring after the impairment was recognized. Impairment losses on available-for-sale equity instruments are not reversed.

(in Canadian dollars)

Equipment

Equipment is stated at cost less accumulated amortization and any accumulated impairment losses. Cost includes expenditures that are directly attributable to the acquisition of the asset. Subsequent costs are included in the asset's carrying amount and recognized as a separate asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the Company and the cost can be measured reliably. The carrying amount of a replaced asset is derecognized when replaced. Amortization methods, useful lives and residual values are reviewed at each annual reporting date and adjusted if appropriate. Amortization is recorded on a straight-line basis over the estimated lives of the equipment as follows:

Computer equipment	3 years
Computer software	2 years
Office equipment	5 years

Gains and losses on disposals are determined by comparing the proceeds with the carrying amount and are recognized in the statements of loss as other gains (losses).

Intangible assets

Intangible assets include patent rights and technology rights that have been acquired from third parties. The Company's intangible assets are shown separately at historical cost. The Company's intangible assets have finite useful lives and are carried at cost less accumulated amortization. Amortization is calculated using the straight-line method to allocate the cost of the licences over their estimated useful lives of nine to 11 years.

Research and development expenses include payroll, employee benefits, share-based payments, and other headcount-related expenses associated with product research and other activities. Research and development expenses also include third-party activities and clinical trial expenses. Such costs related to product development are included in research and development expense until the point that technological feasibility is reached, which for the Company's products, is generally shortly before the products are approved by the authorities. Once technological feasibility is reached, such costs are capitalized and amortized to cost of revenue over the estimated lives of the products.

Expenditures associated with the maintenance of the licensing are expensed as incurred. Other development expenditures that do not meet the criteria for capitalization are recognized as an expense when incurred. Costs previously recognized as an expense are not recognized as an asset in a subsequent period.

(in Canadian dollars)

Impairment of non-financial assets

The Company periodically reviews the useful lives and the carrying values of its long-lived assets. Long-lived assets are reviewed for impairment upon the occurrence of events or changes in circumstances indicating that the carrying value of the asset may not be recoverable. For the purpose of measuring recoverable amounts, assets are grouped at the lowest levels for which there are separately identifiable cash flows (cash-generating units or CGU). The recoverable amount is the higher of an asset's fair value less costs to sell and value in use (being the present value of the expected future cash flow of the relevant asset or CGU). Any impairment loss is recognized for the amount by which the asset's carrying amount exceeds its recoverable amount.

Provisions

Provisions for research and development and general operations are recognized when the Company has a present legal or constructive obligation as a result of past events; it is probable that an outflow of resources will be required to settle the obligation; and the amount has been reliably estimated.

Where there are a number of similar obligations, the likelihood that an outflow will be required in settlement is determined by considering the class of obligations as a whole. A provision is recognized even if the likelihood of an outflow with respect to any one item included in the same class of obligations may be small.

Share-based payments

The Company grants share-based options to directors, officers, employees and consultants as consideration for work or services performed. Compensation expense is recorded for share-based grants that vest in instalments over the vesting period as separate arrangements.

When the share-based options are exercised, the Company issues new shares. The proceeds are credited to capital stock (note 8). Upon exercise, the amount previously recognized in contributed surplus is transferred to capital stock.

The expense is recognized over the vesting period, which is the period over which all the vesting conditions are to be satisfied.

Loss per share

Basic and diluted loss per share is calculated by dividing net loss for the period attributable to the Company by the weighted average number of common shares outstanding and the dilutive impact of outstanding warrants and options during the period.

(in Canadian dollars)

3 New and revised IFRS affecting amounts reported and or disclosures in the financial statements

Accounting standard issued and not yet applied

IFRS 9, Financial Instruments

IFRS 9 addresses the classification, measurement and recognition of financial assets and financial liabilities. IFRS 9 was issued in November 2009 and October 2010. It replaces the parts of International Accounting Standards ("IAS") 39 that relate to the classification and measurement of financial instruments. IFRS 9 requires financial assets to be classified into two measurement categories: those measured at fair value and those measured at amortized cost. The determination is made at initial recognition. Where the fair value option is taken, the part of a fair value change due to an entity's own credit risk is recorded in other comprehensive income rather than the income statement, unless this creates an accounting mismatch. The Company does not expect IFRS 9 to have a material impact on the financial statements and will also consider the impact of the remaining phases of IFRS 9 when completed by the IASB.

4 Other investments

As part of an exclusive licence agreement entered into on June 24, 2011, with IMMUNE Pharmaceutical Inc., a private Israeli company (the "IMMUNE Licence Agreement") the Company received 600,000 IMMUNE common shares ("IMMUNE Shares") and 200,000 IMMUNE Warrants in addition to certain other cash consideration. Subsequently, pursuant to a share exchange in connection with IMMUNE's merger with Epicept Corporation ("Epicept") in 2013, the Company exchanged its IMMUNE shares and warrants for 654,486 common shares and 123,649 warrants of Epicept.

The following tables represent the changes in the investments for the year:

	Shares	$
Balance - December 31, 2014	536,669	1,176,593
Change in fair value	-	24,305
Sale of shares (note a)	(536,669)	(1,200,898)
Balance - December 31, 2015	-	-

a) Effective December 8, 2014, the Company began selling the IMMUNE Shares, which trade on the NASDAQ under the symbol IMNP. During 2015, the remaining IMMUNE Shares were sold at fair market value. On disposition, the accumulated loss of $46,302 held within other comprehensive income was reclassified to the statements of loss. In addition, transaction costs of $27,300 were included within the loss on disposal.

(in Canadian dollars)

	Warrants	$
Balance - December 31, 2014	123,649	60,643
Change in fair value (note b)	-	(16,447)
Balance - December 31, 2015	123,649	44,196

b) The IMMUNE Warrants were valued at year end using the Black Scholes option pricing model. The inputs used for the model are as follows: stock price US$0.73, strike price US$2.63, term of three years, volatility of -99% and a risk-free interest rate of 0.75%.

5 Taxes and other receivables

	2015 $	2014 $
Taxes (HST/GST)	15,144	9,990
Other receivable (i)	8,672	29,077
	23,816	39,067

i) Receivables in the amount of $8,672 (2014 - $29,077) are related to National Research Council of Canada's Industrial Research Assistance Program ("IRAP") grant.

6 Intangible assets

	January 1, 2015							December 31, 2015

Balance - December 31, 2015 and 2014	84,457,713	28,048,137

a) On January 27, 2014, the Company issued 16,206,483 units at a price of $0.4165 per unit for aggregate gross proceeds of $6.75 million. Each unit comprises one common share of the company and three-quarters of one common share purchase warrant (a "Warrant"). Each Warrant is exercisable at a price of $0.539 and entitles the holder to acquire one common share for a period of five years following the date of issuance of the Warrant.

The Warrants were valued utilizing the Black-Scholes option pricing model. The Warrants were valued at $2,307,754. The Company incurred cash share issuance cost of $613,788 of which $209,848 was allocated to Warrants. The key assumptions used to estimate the fair value of Warrants and Agent Units were: dividend yield 0%; volatility 94.74%; and risk-free interest rate 1.63%.

(in Canadian dollars)

Stock options

Under the stock option plan, the aggregate number of common shares reserved for issuance is 4,000,000.

	Number of stock options outstanding	Weighted average exercise price $
Balance - December 31, 2013	2,965,000	0.51
Exercised	(100,000)	0.18

Permanent differences	1,824	(175,517)
Other	15,916	53,843
	-	-

14 Segmented information

The Company identifies its operating segments based on business activities, management responsibility and geographical location. The Company operates within a single operating segment, being the research and development of ophthalmic indications, and operates in one geographic area, being Canada. All of the Company's assets are located in Canada.

15 Commitments and contingencies

a) Contractual commitments

The Company may be required to make milestone, royalty, and other research and development funding payments under research and development collaboration and other agreements with third parties. These payments are contingent upon the achievement of specific development, regulatory and/or commercial milestones. The Company has not accrued for these payments as of December 31, 2015 due to the uncertainty over whether these milestones will be achieved. The Company's significant contingent milestone, royalty and other research and development commitments are as follows:

ISIS

In connection with the licensing agreement between ISIS and the Company, the Company may be required to make additional contingent payments of up to US$22 million upon the achievement of certain development and commercialization milestones of indications pursued and developed. In addition, the Company may be required to pay royalties on future revenues.

(in Canadian dollars)

MedImmune

In connection with the licensing agreement between MedImmune and the Company, the Company was required to make upfront payments totalling US$400,000, of which the last payment was made in December 2007. The Company may be required to make additional contingent payments of up to US$7,000,000 upon the achievement of certain development and commercialization milestones. In addition, the Company may be required to pay royalties on future revenues. The Company may also be required to make additional contingent payments upon the achievement of certain development and commercialization milestones for products developed outside the ocular field.

University of British Columbia ("UBC")

On May 6, 2008, the Company signed an agreement with UBC for the exclusive worldwide licence to iCo-009 (the "UBC Licence"). In consideration for the UBC Licence, the Company paid UBC an initial licence fee of $20,000 and is required to pay annual fees to UBC for maintaining the licence until such time as a New Drug Application ("NDA") for iCo-009 is approved. The Company is required to make additional contingent payments of up to $1,900,000 in aggregate upon the achievement of certain development and commercialization milestones and is also required to pay royalties on future revenues. The UBC Licence additionally requires the Company to contribute research funding (which may be in the form of direct payments from the Company or indirect payments, such as securing research grants) to UBC for the Oral AmpB program. All the research funding financial obligations have been met by the Company.

NRC - IRAP

On May 31, 2012, the Company was awarded a $1,100,000 three-year, non-repayable financial contribution from the National Research Council of IRAP to support iCo's Oral Amphotericin B ("Amp B") delivery system as novel treatment for patients with Human Immunodeficiency Virus ("HIV"). The funding was intended to support feasibility testing and pre-clinical toxicology studies, as well as human safety and efficacy clinical trials to examine the role of the Oral Amp B delivery system in potentially treating patients with latent HIV reservoirs. Under the grant, up to 75% of the costs of the project may be claimed subject to the $1,100,000 maximum. The Company submits monthly expenditure claims that are subject to IRAP approval and subsequent reimbursement. For the year ended December 31, 2015, iCo recognized $34,387 (2014 - $336,919) of the IRAP grant as other income.

(in Canadian dollars)

16 Financial instruments and financial risk management

Fair value

Financial instrument disclosures establish a fair value hierarchy that requires the Company to maximize the use of observable inputs and minimize the use of unobservable inputs when measuring fair value. The Company primarily applies the market approach for recurring fair value measurements. This section describes three input levels that may be used to measure fair value:

Level 1 - unadjusted quoted prices in active markets for identical assets or liabilities. An active market for the asset or liability is a market in which transactions for the asset or liability occur with sufficient frequency and volume to provide information on an ongoing basis. The Company does not have any financial instruments in this category.

Level 2 - quoted prices for similar assets or liabilities; quoted prices in markets that are not active; or other inputs that are observable or can be corroborated by observable market data for substantially the full term of the assets or liabilities.

Level 3 - unobservable inputs that are supported by little or no market activity and that are significant to the fair value of the assets or liabilities.

The following table presents the Company's assets and liabilities that are measured at fair value at December 31:

			At December 31, 2015
	Level 1 $	Level 2 $	Level 3 $
Assets			
Fair value through profit or loss			
Warrants (IMMUNE)	-	-	44,196

			At December 31, 2014
	Level 1 $	Level 2 $	Level 3 $
Assets			
Available for sale - equity			
Common shares (IMMUNE)	1,176,592	-	-
Fair value through profit or loss			
Warrants (IMMUNE)	-	-	60,643

(in Canadian dollars)

Financial instruments whose carrying value approximates fair value

Cash and cash equivalents, short-term investments and other receivables are financial instruments whose fair value approximates their carrying value due to their short-term maturity.

The fair value of accounts payable may be less than its carrying value due to liquidity risk.

Market risk

Market risk is the risk that changes in market prices, such as foreign exchange rates, interest rates and equity prices, will affect the Company's income or valuation of its financial instruments.

The Company is exposed to financial risk related to fluctuation of foreign exchange rates. Foreign currency risk is limited to the portion of the Company's business transactions denominated in currencies other than the Canadian dollar, primarily expenses for research and development incurred in US$. The Company believes that the results of operations, financial position and cash flows would be affected by a sudden change in foreign exchange rates, but would not impair or enhance its ability to pay its US$. The Company manages foreign exchange risk by maintaining US$ cash on hand to fund its short-term US$ expenditures. As at December 31, 2015, US$ denominated cash and short-term investments totalled US$1,318,143. The US$ denominated accounts payable and accrued liabilities exposure is US$17,410.

The other investment of IMMUNE is denominated in US$. A change in share price and foreign exchange would have the following impact:

			2015
	Other investments shares $	Other investments warrants $	Other investments Total $
5% increase in share price and foreign exchange rate	-	50,061	50,061
5% decrease in share price and foreign exchange rate	-	38,758	38,758

a) Foreign exchange risk

Foreign exchange risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in foreign exchange rates.

(in Canadian dollars)

Balances in foreign currencies at December 31 are as follows:

	2015 US balance $	2014 US balance $
Cash and cash equivalents	1,318,143	2,337,984
Accounts payable and accrued liabilities	(17,410)	(1,254,082)
	1,300,733	1,083,902

Based on the US$ balance sheet exposure at December 31, 2015, with other variables unchanged, the effect of 10% change in exchange rates on the net current monetary liabilities/assets would be $130,073 (2014 - $145,810).

b) Interest rate risk

The Company is subject to interest rate risk on its cash and cash equivalents and short-term investments and believes that the results of operations, financial position and cash flows would not be significantly affected by a sudden change in market interest rates relative to the investment interest rates due to the short-term nature of the investments. The only financial instruments that expose the Company to interest rate risk are its cash and cash equivalents and short-term investments. Cash and cash equivalents in excess of day-to-day requirements are placed in short-term deposits with high quality credit financial institutions and earn interest at rates available at that time.

As at December 31, 2015, cash and cash equivalents and short-term investments held in Canadian dollar savings accounts total $1,318,143 (2014 - $2,995,506). The interest rates range from 0.0% to 0.25%.

Liquidity risk

Liquidity risk is the risk that the Company will encounter difficulty in raising funds to meet cash flow requirements associated with financial instruments.

The Company continues to manage its liquidity risk by monitoring its cash flows and investments regularly, comparing actual results with budgets and future cash requirements.

The following table summarizes the relative maturities of the financial liabilities of the Company:

	Maturity	
	Less than one year $	Greater than one year $
Accounts payable and accrued liabilities	115,212	-

(in Canadian dollars)

Credit risk

Credit risk arises from cash and cash equivalents, deposits with banks and financial institutions, as well as outstanding receivables. The Company invests its excess cash in short-term Guaranteed Investment Certificates. The Company has established guidelines relative to diversification, credit ratings and maturities that maintain safety and liquidity. These guidelines are periodically reviewed by the Company's Board of Directors and modified to reflect changes in market conditions.

The Company limits its exposure to credit risk, with respect to cash and cash equivalents, by placing them with high quality credit financial institutions. The Company's cash equivalents consist primarily of operating funds and deposit investments with commercial banks.

17 Capital management

The Company considers its capital stock, contributed surplus and warrants as capital. As at December 31, 2015, the Company's capital totalled $34,395,102 (2014 - $34,395,102).

The Company manages its capital structure in order to ensure sufficient resources are available to meet day-to-day operation requirements, further develop its existing technology, advance its clinical trials and continue as a going concern.

In order to maintain or adjust the capital structure, the Company may issue new shares or sell assets. Total capital is calculated as the Company's own equity.

The Company is not subject to any externally exposed capital requirements.

18 Subsequent events

(a) Strategy

On January 18, 2016, the Company announced that in an effort to preserve its asset base and maximize shareholder value, the Company was undertaking a strategic re-organization. Steps are being taken to significantly reduce iCo's monthly burn rate and fixed costs, which include the termination of all employees. Andrew Rae and John Meekison were retained in a reduced consulting capacity to continue their CEO and CFO positions, respectively. Other key persons, including Dr. Peter Hnik who acted as Chief Medical Officer historically is also participating in a consulting capacity. Remaining non-essential expenses are to be eliminated. The related restructuring costs in the amount of $426,878 were paid in January and February, 2016.

In addition to further developing its existing assets, iCo will continue to search for new business opportunities. Such a search will not be restricted to the life science area, but will include other industries which could enhance value for the Company's shareholders.

(in Canadian dollars)

(b) Stock options granted

On February 17, 2016, the Company announced the grant of stock options to directors, officers and consultants to the Company. iCo granted an aggregate of 850,000 options to acquire common shares of the Company at an exercise price of $0.05. The options will expire on February 16, 2021 and shall vest as follows: 1/5 on today's date (the "Effective Date"), 1/5 three (3) months after the Effective Date, 1/5 six (6) months after the Effective Date, 1/5 nine (9) months after the Effective Date and the remaining 1/5 to vest ratably per month beginning ten (10) months after the Effective Date and ending eighteen (18) months after the Effective Date. After giving effect to this option grant, a total of 2,995,000 stock options will be issued and outstanding with 690,357 remaining for future issuance under the Company's stock option plan.
